

Four Square Cipher

@author Mark Kavanagh

@version Java 25

To Run

From console at src file directory:

```
java ie.atu.sw.Runner.
```

You must input the path of the input file to be used, if not the programme will not encrypt or decrypt. The output file will be set as 'output.txt' by default.

After the above is set, select the correct menu option to encrypt or decrypt the text file chosen. The encryption key is as in TABLE in the FourSquareCipher class.

Features

- Specify the file to be encrypted/decrypted.
 - Only text files can be inputted.
 - Input the relative path.
- Specify output file name.
 - Input the relative path or if just a file name is used, the file will be saved in the src folder.
- Encrypt/Decrypt the file:
 - Once an input file name has been inputted, the text file will be encrypted/decrypted and outputted to the chosen output file.
- The name of the encryption file, decryption file and output file are displayed on the console for the user.
